

Conclusion

- The range of the main problems of the philosophy of science is quite wide:
 - the scientific criteria and the differences between the scientific knowledge and the unscientific one;
 - logic of the scientific research; structure of the scientific knowledge;
 - mechanisms for generating new knowledge;
 - scientific rationality; patterns of the history of science; interaction of science and culture;
 - science base; value of science; ethos of science, etc.
All of them are derived from the central problem of the philosophy of science – the problem of growth (development) of the scientific knowledge.
