

Bukhtina L.G. Environmental protection is a priority of the industry // Railway transport..

Ensuring a high level of environmental safety for Russian Railways is one of the highest and invariable priorities.

The company has an environmental management system, one of the links of which is the Scientific and Production Center for Environmental Protection. The high level of equipment allows you to carry out all work with high quality and in a short time. Most of the work is done at the request of railway enterprises at road facilities. Analytical information is being prepared on the quality and quantity of emissions, pollutant discharges, waste disposal; Calculations are prepared penalties for a negative impact on the environment.
