

Elements of language C

Operations and expressions

- It is necessary to understand the actions which are carried out by the program above objects determined in her as operations. For a designation of operations some standard combinations of special symbols from the alphabet of language are used. The objects of the program participating in operation, refer to as operands. Any combination of one or greater number of operands and symbols of the operations, giving a unique value, forms expression. Any expression, coming to an end a semicolon, is the operator. The set of all operations of language C is convenient for dividing into eight following groups:
